                                                                                                                                                                                                                                                                                                                                                                                                                                                         v36754-v37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see 201425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, barthollnitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention
New peptide antagonist of zonulin useful as antiinflammatory agent for treating cerebral ischemia, stroke, cerebral edema, gastritis, shigellosis, viral gastroenteritis, meningitis, encephalomyelitis -

The peptide antagonists are based on a common motif of 20T and human zonulins, which is believed to be critical for receptor binding. They can be prepared by chemical synthesis or by use of recombinant has techniques who worked a second to be considered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          69pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 an

The peptide antagonists are used as an antiinflammatory agents in the treatment of gastrointestinal inflammation, where they bind to the ZOT receptor in the intestine and yet does not physiologically modulate the opening of TJ in the intestine. Gastrointestinal inflammation conditions give rise to increased intestinal permeability and the peptide is useful for treating intestinal conditions that cause protein losing enteropathy caused by infection, e.g. Clostridium difficile infection, enterocolitis, shigellosis, viral gastroenteritis, parasite enterocolitis, shigellosis, viral gastroenteritis, parasite infestation, bacterial overgrowth, whipple's disease, diseases with mucosal erosion or ulcerations, e.g. gastritis, gastric cancer, collagenous colitis, inflammatory bowel disease, diseases marked by lymphatic obstruction, e.g. congenital intestinal lymphanglectasia, sarcoidosis lymphoma, mesenteric tuberculosis, and after surgical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

This deglycosylation is sufficient to destroy the ability of the saponin to complex with membrane sterols. Saponinysterol complexes in eukaryotic membranes results in pore formation and leakage of cell contents, with subsequent cell death. The DNA and proteins of the invention are useful in identification of related enzymes, structural studies of saponins and also for development of agents which can modulate SGH activity, e.g. for reducing pathogenicity of SGH-producing pathogens for specific hosts.
give sequentially the mono- and bis-deglucosylated forms, both of which are substantially less toxic to fungal growth than avenacin A-1 itself. This deglycosylation is sufficient to destroy the ability of the saponin to complex with membrane sterols. The DNA and proteins of the invention are useful in identification of related enzymes, structural studies of saponins and also for development of agents which can modulate SGH activity, e.g. for
                                                                                                                                  The saponin glycosyl hydrolase (SGH) designated avenacinase-like protein is encoded by 706024, and was isolated from the plant pathogenic fungi Gaeumannomyces graminis var. tritici. Avenacinase detoxifies the triterpenoid saponin avenacin A-1 found in oat roots, by hydrolytic triterpenoid saponin avenacin A-1 found in oat roots, by hydrolytic cleavage of the beta, 1-2 and beta, 1-4 linked terminal glucose mol. to

Avenacinase-like protein is a saponin glycosyl hydrolase (SGH) encoded CC by T06023, isolated from the plant pathogenic fungi Gaeumannomyces CC graminis var graminis. This enzyme has action like that of avenacinase CC (R85198) which detoxifies the triterpenoid saponin avenacin A-1 found in CC cat roots, by hydrolytic cleavage of the beta, 1-2 and beta, 1-4 linked CC terminal glucose mol. to give sequentially the mono- and biscot deglucosylated forms, both of which are substantially less toxic CC to fungal growth than avenacin A-1 itself. This deglycosylation is Sufficient to destroy the ability of the saponin to complex with membrane sterols. Saponin/sterol complexes in eukaryotic membranes results in pore formation and leakage of cell contents, with subsequent cell death. The CC but and proteins of the invention are useful in identification of related cenzymes, structural studies of saponins and also for development of CC agents which can modulate SGH activity, e.g. for reducing pathogenicity CC of SGH-producing pathogens for specific hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               XX
SS
recombinant DNA techniques. The peptide antagonists are used as an antiinflammatory agents in the treatment of gastrointestinal inflammation, where they bind to the ZOT receptor in the intestine and yet does not physiologically modulate the opening of TJ in the intestine. Gastrointestinal inflammation conditions give rise to increased intestinal permeability and the peptide is useful for treating intestinal conditions that cause protein losing enteropathy caused by infection, e.g. Clostridium difficile infection, enterocolitis, shigellosis, viral gastroenteritis, parasite enterocolitis, shigellosis, viral gastroenteritis, parasite infestation, bacterial overgrowth, whipple's disease, diseases with mucosal erosion or ulcerations, e.g. gastritis, gastric cancer, collagenous colitis, inflammatory bowel disease, diseases marked by lymphatic obstruction, e.g. congenital intestinal lymphanglectasia, sarcoidosis lymphoma, mesenteric tuberculosis, and after surgical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                  (2) one of 25 such peptides (see vi9105-29) of the invention, which bind to a zonula occludens toxin (207) receptor, yet do not physiologically modulate the opening of mammalian tight junctions (TJ). The peptide antagonists are based on a common motif of 207 and human zonulins, which is believed to be critical for receptor binding. They can be prepared by chemical synthesis or by use of recombinant DNA techniques. The peptide antagonists are used as an antiinflammatory agents in the treatment of gastrointestinal inflammation, where they bind to the 207 receptor in the intestine and yet does not physiologically modulate the opening of TJ in the intestine. Gastrointestinal inflammation conditions give rise to increased intestinal permeability and the peptide is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           correction of congenital heart disease with Fontan's operation, mucosal diseases without ulceration, e.g. Menetrier's disease, coeliac disease, eosinophilic gastroenteritis, and immune diseases, e.g. systemic lupus erythematosus or food allergies, primarily to milk.

             This present sequence is that of a peptide antagonist of zonulin (2), one of 25 such peptides (see Y7915-29) of the invention, which bind to a zonula occludens toxin (ZOT) receptor, yet do not physiologically modulate the opening of mammalian tight junctions (TJ). The peptide antagonists are based on a common motif of ZOT and human zonulins, which is believed to be critical for receptor binding. They can be prepared by chemical synthesis or by use of recombinant DNA techniques. The peptide antagonists are used as antiinflammatory agents in the treatment of gastrointestinal inflammation, where they bind to the ZOT receptor in the intestine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          lymphatic obstruction, e.g. congenital intestinal lymphanglectasia sarcoidosis lymphoma, mesenteric tuberculosis, and after surgical correction of congenital heart disease with Fontan's operation, mucosal diseases without ulceration, e.g. Menetrier's disease, coeliac disease, eosinophilic gastroenteritis, and immune diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neuroprotective; dermatological; antiulcer; antiviral antibacterial; cytosmatic; anti-HIV; vulnerary; antia hypotensive; immunosuppressive; antiparasitic; vasotr gastrointestinal inflammation; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

New peptide antagonist of zonulin useful as antiinflammatory agent for

```
physiologically modulate the opening of mammalian tight junctions (TJ). The peptide antagonists are based on a common motif of ZOT and human zonulins, which is believed to be critical for receptor binding. They can be prepared by chemical synthesis or by use of crecombinant DNA techniques. The peptide antagonists are used as an antinflammation, where they bind to the ZOT receptor in the intestine and yet does not physiologically modulate the opening of TJ in the creating intestinal permeability and the peptide is useful for treating intestinal conditions that cause protein losing enteropathy caused by infection, e.g. Clostridium difficile infection, enterocolitis, shigelosis, viral gastroenteritis, parasite infestation, bacterial overgrowth, whipple's disease, diseases with mucosal erosion or ulcerations, e.g. caused by infestation, e.g. congenital intestinal lymphangiectasia, collagenous colitis, inflammatory bowel disease, diseases with sarcoidosis lymphoma, mesenteric tuberculosis, and after surgical correction of congenital heart disease with Fontan's operation, coeliac disease, eosiophilic gastroenteritis, and immune disease, e.g. e.g. systemic lupus erythematosus or food allernies or remarking e.g. e.g. systemic lupus erythematosus or food allernies or common or constances.

   The present sequence is that of the N-terminal region of foetal human intestinal zonulin. The N-terminal sequences of human adult and foetal zonulins (see Y79130-36) were compared with Vibrio cholerae zonula occludens toxin (ZOT) to identify a common motif thought to be involved in receptor binding. Peptide antagonists (see Y79105-29) based on this motif are useful as antiinflammation, and for treatment of gastrointestinal inflammation, and for treatment of conditions associated with breakdown of the blood-brain

(TJ). The peptide antagonists are based on a common motif of ZOT and human zonulins, which is believed to be critical for receptor binding. They can be prepared by chemical synthesis or by use of recombinant DNA techniques. The peptide antagonists are used as an antiinflammatory agents in the treatment of gastrointestinal inflammation, where they bind to the ZOT receptor in the intestine and yet does not physiologically modulate the opening of TJ in the intestine. Gastrointestinal inflammation conditions give rise to increased intestinal permeability and the peptide is useful for treating intestinal conditions that cause protein losing enteropath caused by infection, e.g. Clostridium difficile infection,
  to produce a holo-carrier protein. The BLM gene cluster or catalytic domains can be used individually or collectively to produce thiazolidine, thiazoline, bithiazoline and bithiazoline containing microbial metabolites. The BLM gene cluster may also be used to produce sugars.

   a thromboembolic disorder associated with the formation of fibrin clots. The composition comprises, as the active ingredient, a complex of a single chain urokinase type plasminogen activator (scuPA) and a soluble urokinase plasminogen activator receptor (suPAR). The complex (scuPA) suPAR) has thrombolytic activity under physiological conditions and in the presence of IgG, or of at least 1 IgG-derived peptide, and induces fibrinolysis of fibrin clots. The compositions and complex are useful for the treatment or prevention of thromboembolic disorders associated with the formation of fibrin clots, especially myocardial infractions, cerebro-vascular events, pulmonary embolism and deep vein thrombosis.

   sequences encoded by novel isolated genes. The genes (Q78939-79002) were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers Q78917-38. The genes are subdivided into 5 families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially digested with TaqI restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with ClaI-digested cosmid vector pJB81. The ligation products were in vitro packed and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The Vh genes and immunoglobulin in mammalian hosts.
